

Things you already know:

- Be familiar with tv programs and films.
- Understand that video cameras are used to record moving images.
- Know how to use an iPad to open apps, tap icons and drag items.

Knowledge you will gain:

- To know the different camera shots that are commonly used:
 - ⇒ **Wide shot:** shows entire object and usually includes surroundings.
 - ⇒ **Medium shot:** Typically a waist to head shot showing the main object of the video as the focus.
 - ⇒ **Close up:** Typically a head and shoulders shot.
 - ⇒ **Extreme close up:** Focus on one specific area e.g. An eye or mouth.
 - ⇒ **Slow-motion (slowmo):** Video footage made to look as if it is going slowly.
- Know how to plan a sports instructional video.
- How to plan roles for different people within their team
- Know how to use iMovie to put together the different shots they have planned.
- Know how to trim video clips to keep only the best parts
- To know how to add voiceover, title screens and music to create a polished video.

Specific skills/understanding

Throughout all of the skills and knowledge being taught this half term, the key is to make sure that the planning sheet is guiding all of the choices being made, frequently checking back to ensure this is being followed.

Computing Knowledge Organiser Year 3

Spring Term 1

We are Planners

Vocabulary

Clips: An individual recording of video, usually intended to be put with other clips to make a full length video.

Export: Once edited to make the video playable for others it needs to be exported out of iMovie and saved as a standard video file.

Footage: The unedited video initially recorded.

Shot: Type of angle or zoom used when recording video footage.

Ongoing skill set

Develop skills of working between multiple applications, e.g. the camera to record, iMovie to collate clips, the internet to gather title images.
